Military Post Office Finder

Abstract

This application will be installed in only our military base mobile phones with a password that only we know, and we can give our phones to outsider users so they can find the military office they are looking for. After three minutes of use the application closes and goes back to the login screen so the user needs to enter the password again. I've made this because the military post offices must not be available for everybody to watch.

The application contains about 3000 post offices.
